Industrial Visit at eSparkBiz

Our IT department organized an industrial visit on 14th August at eSparkBiz. It is a software development company with 370+ software engineers. ESparkBiz has 12+ years of expertise in recruiting, training, and managing offshore developers. They also serve startups, enterprises, product/saas firm and IT staff agency.

On 14th August 2024, we reached the location by 11:15 a.m. we were total 29 students with 6 faculty mentors, Dr. Purvi Ramanuj, Dr. Shital Solanki, Prof. Swati Patel, Dr. Mital Panchal, Prof. Alka Patel, and Prof. Jaimin Chavda. We entered there by 11:30. Then we were taken to canteen of the company. There we were provided tea/coffee as refreshments. Then we observed the infrastructure and features there. There were also a clip playing about the company and their services. Then we talked with the CTO of the company Mr. Chintan Gor sir. He first took our introduction. Then he asked us about our interests. And introduced us with the current scenarios in the IT industry.

Sir asked us about the realities of working in various industries-how they operate and how tasks are typically carried out. We responded based on our current understanding and knowledge. He then provided us with insightful guidance, revealing the true nature of how industries function. Additionally, he shared some of his personal experiences, which were incredibly valuable. These insights not only broadened our perspective but also gave us a clearer understanding of the practical challenges and opportunities we might face in our future careers.

After that, we were taken to the conference room, where we discussed various technologies such as Python, AI and Machine Learning, web development, full-stack development, and data analysis. Our instructor inquired about our individual interests and then provided valuable guidance on how to choose the right stream. He suggested several approaches to help us make informed decisions. One of his key recommendations was to start working on projects early on, as this would allow us to discover which field genuinely interests us. According to him, by the time we reach our 5th semester, we should have a clearer idea of the path we want to pursue. He also emphasized the importance of first following the syllabus

closely, and then gradually expanding our focus to other areas.

   After the session, we had a refreshment break. The employees of the company then gave us a tour of their office. They showed us the developers' rooms, the marketing team's area, and other departments within the company. The infrastructure was impressive, reflecting a well-organized and professional environment. Following the tour, we were treated to some snacks, which gave us a chance to relax and discuss what we had observed. It was a great opportunity to get a firsthand look at how different teams operate within a real-world business setting.

   After the break, we had another session where our instructor discussed how to gain expertise in any technology. He provided us with valuable references and resources for learning and improving our skills. Additionally, he explained how industries operate, detailing how they manage data, tasks, and programs, among other aspects. This session gave us a deeper understanding of the inner workings of the industry. The entire visit was incredibly informative, and we walked away with a wealth of knowledge that will be beneficial as we continue our studies and prepare for our future careers.
