

INDUSTRIAL VISIT

B.E. Semester III, Chemical

Name of Industry: Rhythm Biocare, Chadotar Gadh Road, Vedancha, Palanpur, Banaskantha, Gujarat-385511

Date: 29th November, 2021

An online visit was organized for 2nd year students of BE Chemical Engineering at Rhythm Biocare plant on 29th November, 2021. This is a bio-medical waste facility in which the waste taken from the clinical facilities or other waste generated is collected and treated here. The renewable materials are separated from waste and are converted into very small pieces (as they are easy to process). The high temperature converts the waste into liquid form in a reactor. The product is then fed into a second reactor where its temperature is reduced. Gases and water are removed from the product here. Prof. Ronak R. Patel and Mr. Ashish Rathod coordinated the online visit with the students.
