

L. D. College of Engineering, Ahmedabad-380015
Computer Engineering Department,
KAIZEN 2K21
Departmental Report

Date: 23/4/2021

KAIZEN 2K21 – “continuous improvement” event was organized in our department on 19th and 20th April, 2021 online mode where 150 students from UG - BE in Computer Engineering and 17 students from PG - ME in Computer Engineering have participated in project demonstration -open house project exhibition.

There were 47 projects from UG n 17 from PG in exhibition and evaluated by industry & academic experts.

Details are following:

No of students participated: 150(UG) + 17 (PG)

No of projects: 47(UG) + 17 (PG)

Experts:

Sr No.	Name	Post	Organization
1	Prof. Mr Swapnil Panchal	Professor, IT Deptt.	Gandhinagar Institue of Technology
2	Mr. Sagar H Gupte	Solution Consultant APAC	Jaggaer
3	Mr Deep Patel	Co-Founder & COO	Zybra Private Limited
4	Sanjay makwana	Full stack Shopify developer	Avid Brio LLP

Tracks : 8 (2 PG + 6 UG)

Timing: 1.30pm onwards on 19/4/2021 & 20/4/2021

Platform /mode: Online on MSteam.

Sr No	Links	BE/ME	Tracks	Date	Time

PG projects: Track 1 & 2

Track	Enrollment No	Name	Guide Name	Dissertation Title
1	190280702001	ADITYA R MISHRA	Prof. B. A. Oza	Article Summarization using text reduction techniques
1	190280702002	BHATT MEGHNA JAYESHBHAI	Prof. J. K. Dave	Efficient and confidentiality preserving proof of ownership for deduplicated cloud storage system
1	190280702004	BHUSARA ARCHANAKUMAREE DINESHBHAI	Prof. P. V. Pancholi	Sentiment Analysis of Social Media Data on critical events using ML techniques
1	190280702006	Dhritesh Patel	Prof. P. R. Dave	Live Subtitle generation
1	190280702007	GOSWAMI JAIMIN JAGDISHGIRI	Prof. M. K. Shah	Deep learning based conversational question answering system
1	190280702008	Khushbu A Chauhan	Prof. B. H. Trivedi	Lightweight intrusion detection system for IoT botnets using ML
1	190280702009	MEHTA SHILPA VINOD	Prof. H. A. Joshiyara	Improving a QoS parameter for Load Balancing in Cloud Computing Environment
1	190280702010	Namrata Govind Ambekar	Prof. R. Jaiswal	Use of Comprehensive Technique for Preserving Privacy in Data Mining
2	190280702011	PANCHOLI DEEP DHARMESHBHAI	Prof. J. K. Dave	Secure and efficient key management for deduplicated cloud storage system
2	190280702012	Patel Hemalben Mukeshkumar	Prof. N. H. Domadiya	Privacy preserving association rule mining approaches for vertically partitioned data
2	190280702013	Patel Jini Ajitbhai	Prof. R. Jaiswal	Enhancing a load balancing algorithm with the use of data deduplication
2	190280702014	PATEL SANKET CHANDRAKANT	Prof. P. D. Salot	Pothole detection using enhanced Object detection
2	190280702016	RANA ZALAK NILESHBHAI	Prof. P. G. Patel	Improve performance of data privacy in electronics health records system using blockchain
2	190280702018	SHAH POOJAN VIPULBHAI	Prof. T. A. Champaneria	Prediction of missing sensor data using ML for IoT
2	190280702019	SHAH ROHAN JIGNESHKUMAR	Prof. H. A. Joshiyara	Enhancement in Face detection and Recognition techniques
2	190280702020	TADVI ANJALIBEN ARVINDBHAI	Prof. Z. Y. Noorani	Reducing the complexity in IoT device with lightweight Cryptography Technique /Algo
2	190280702021	Tandel Daksh Ashokkumar	Prof. Y. B. Patel	Cloud Computing Load Balancing using Genetic and Index Approach

UG :

1. Intkut - Deepfake Detection	<p>The main perspective of "Intkut" is to provide a solution that can detect fake videos with the help of convolutional neural networks. deep fake media is generated using various deep learning techniques like GAN, VFX, and masking techniques which seem realistic and which a human eye cannot differentiate and hence the name deep learning + fake video = deepfake.</p> <p>This technology has a huge impact on how people perceive information. Our project's main goal is to detect these videos and images beforehand to reduce the negative impact they can create on society and minimize the damage. This application can be used by social media companies, media news companies, and the government to reduce fake videos and decrease the proportion of fake news. A multi-layered convolutional neural network is trained on a huge pre-processed and augmented data set that detects deep fake images and video</p>
2. Brain Tumor Detection	<p>Nowadays we have seen most tumors are life-threatening where brain tumors being one of them. As we know that brain tumors can be of any shape, size, location, and intensity, therefore it is very difficult to detect tumor and diagnose it.</p> <p>The manual identification of tumors from MRI images is subjective in nature and may vary from expert to expert depending on their expertise and other factors which include lack of specific and accurate quantitative measures to classify the MRI images as it is a brain tumor or not.</p> <p>Detection of brain tumors from the various symptoms of the patients has always been a major issue for the medical practitioner and pathologist for diagnosis and treatment planning. It is also a fact that some tests may be time-consuming and it gives workloads and difficulty for the pathologists to obtain the accuracy of the presence of the tumor. We are proposing an automated method for the identification of brain tumors with the help of AI.</p> <p>So automated identification of brain tumor from MRI images help in alleviating the major issues and provide better results.</p> <p>We are using TensorFlow, Keras, OpenCV, Python and Flask as our Technology Stack.</p>

3. Deepfake Generation and Recognition	<p>A Deepfake refers to a specific kind of synthetic media where a person in an image or video is swapped with another person's likeness. Deepfake content is created by using two competing AI algorithms -- one is called the generator and the other is called the discriminator. The generator, which creates the phony multimedia content, asks the discriminator to determine whether the content is real or artificial, together called GAN (GENERATIVE ADVERSIAL NETWORK). Deepfake can be used in various fields related to entertainment, films, animations, vfx, advertisement, etc. It can also be used for hoax and frauds if used in wrong way. We can detect and classify Deepfake video/images using Artificial Intelligence too. We use CNN and LSTM to train machine learning model to identify artefacts in a video frames and thus fake video can be recognized. Such Deepfake detector can be a boon for preventing spread of fake news and videos. The use of RexNet 50 to strengthen accuracy and confidence of our model. First we provided functionality to create a face imposed Deepfake using input image and video using a GAN trained on VOXCELEB dataset. Alongside we hosted a Django based website to take input suspect video and classify it using RexNet, CNN and LSTM. The model trained with MESONET dataset gives upto 94% confidence working on 10 frames split videos.</p>

PG Project:

1	<p>Enhancement in Face detection and Recognition techniques</p> <p>Since the era of IOT has begun, cameras among other sensory devices have become an integral part of the information revolution. Detection and recognition through these devices not only make legacy systems more efficient but also able to address and solve new problems that come with modern times. Face detection and recognition is advancing promptly more than ever. Here, we scrutinize a handful of facial detection and recognition algorithms and compare them with respect to their accuracy, execution time and other significant parameters. Accuracy of the algorithms are derived from the images as well as real time feed through the camera. Face recognition involves numerous steps like face detection, pre-processing, feature extraction or embedding generation, and classification. We have reviewed detection, embedding generation techniques, and we have conferred about pre-processing as well. Lastly, we have compared experimental results.</p>

Brain Tumor Detection

Introduction

In today's world, we have seen most of the tumours are life threatening where brain tumour being one of them. The manual identification of tumour from MRI images is subjective in nature and may vary from expert to expert. So automated identification of brain tumour from MRI images will help in alleviating the major issues and provide better results. Detection of brain tumor from the various symptoms of the patients has always been a major issue for the medical practitioner and pathologist for diagnosis and treatment planning. Here we are proposing an automated method to detect brain tumor efficiently.

Objective

Our main objective is to extract meaningful and accurate information from the MRI images with least error possible and Finally conclude whether it's a tumor image or not.

Microsoft Teams interface showing a presentation slide titled 'Words occurrence'. The slide contains text about keyword extraction and a horizontal bar chart showing the frequency of various words.

number of keywords in variable 'Description': 1484

The execution of this function returns three variables:

- keywords: the list of extracted keywords
- keywords_roots: a dictionary where the keys are the keywords roots and the values are the lists of words associated with those roots
- count_keywords: dictionary listing the number of times every word is used

At this point, I convert the count_keywords dictionary into a list, to sort the keywords according to their occurrence:

Words occurrence

- More than 1400 keywords from 3684 products identified and the most frequent ones appear in more than 200 products.
- Words appearing more than 13 times have been considered.

CAPTIONBOT FOR ASSISTIVE VISION

INTRODUCTION

- Nowadays, many visually impaired people still using blind man's stick to sense the road of the direction and object in front of them in this society.
- With just only a plain stick and a pair of covered eye, it is difficult for a human to get sense of their direction. Probably, they would not know what the objects around the people which had been blinded eye.
- In this case, for all the handicap people especially blind people, they have to get use to it on their living style. In order than that, this product is also available to help the small kid's to improve the ability on distinguishing or differentiate the daily use objects. This is the reason why the product mentioned above was developed.

FLOWCHART

METHODOLOGY

- The aim of this project is to develop an Image to Voice converter which able to recognize an image/video from the webcam then detect the movement of the object and then convert it into sound by pytesseract and gtts library or wav file with good performance.

IMAGE INPAINTING USING DEEP LEARNING

ABSTRACT

Inpainting is a conservation process where damaged, deteriorating, or missing parts of an artwork are filled in to present a complete image. It refers to restoration methods used to remove damage or unwanted objects from an image, in a natural manner, such that a neutral observer would not notice any changes and consider the result as being the original image.

OBJECTIVES

This platform will help users get their distorted or deteriorated images reconstructed with minimal efforts. Nowadays, people are fond of clicking pictures of their finest moments and sometimes such photos get spoiled by some objects or people. They can remove such objects from images with much ease using this platform.

METHODOLOGY

We are using TensorFlow as our model framework. The model consists of two layers: Convolutional Layer and Fully Connected Layer.

<Grocery On Safeway/>

Introduction

- Online Grocery Market is allowing customers to directly buy Groceries, fresh fruits, bakery products, etc. from their homes.
- Customers who are habituated to buy a grocery on particular shop, through our application user can select his favourite store and buying the products.
- Customer can subscribe a shop and gets benefits on every monthly shopping.
- The main motive is to resolve a large accessibility to the services and fill the communication gap between service provider and customer.

Current situation

Problem Solition

Key Features

- Searching facilities
- Manage Address details
- Tracks all information of Customers
- Add and Manage Products

Threats and Risks

- ▶ Implementing the cloud technology also inherits its vulnerability to compromising the confidentiality of user data
- ▶ The hardware presently implemented is a small microchip and can't handle heavy loads of data as consumed by huge warehouses, factories and offices. That's where it may fail and we will need to implement a stronger iot technology
- ▶ The access to user account becomes vulnerable if the users don't use strong passwords or disclose them intentionally or unintentionally to anybody else.

FACE RECOGNITION BASED STUDENT ATTENDANCE SYSTEM

ABSTRACT

In this project face of an individual is used for the purpose of attendance making automatically. Attendance of the student is very important for every college, university and school. The face of the student will be captured and saved. Then the faculty will generate an authentication code in order to take the attendance and that code is supposed to be entered and on successful validation the attendance will be marked through the face detection.

OBJECTIVE

- To ensure the speed of the attendance recording process is faster than the previous system which can go as fast as approximately in seconds for each student.
- To provide faculty the view of student's attendance on a DAILY and MONTHLY BASIS.

Introduction

The advent of the World Wide Web and the rapid adoption of social media platforms paved the way for information dissemination that has never been witnessed in the human history before. With the current usage of social media platforms, consumers are creating and sharing more information than ever before, some of which are misleading with no relevance to reality.

Automated classification of a text article as misinformation or disinformation is a challenging task. In this work, we propose to use machine learning ensemble approach for automated classification of news articles. Our study explores different textual properties that can be used to distinguish fake contents from real. We are training combination of different machine learning algorithms using various ensemble methods and evaluate their performance on real world dataset while creating a website having an easy to use interface.

Project Review Feedback:

By Experts:

Prof. Mr Swapnil Panchal, Professor, IT Deptt., Gandhinagar Institute of Technology:
Students can get more knowledge from seniors and industry persons from this kind of event. Based on the review of the projects, sir has suggested to keep the team size of 2-3 members, specific

outputs should be expected from the projects, readymade stuff should be avoided to build a good project, student should develop their confidence towards the failour of the project, keep use of Artificial Intelligence more,

Mr. Sagar H Gupte, Solution Consultant APAC, Jaggaer:

Students had developed very good projects which are useful to the society, like medication projects. In that they also have to add features for the people who are using their regional language.

By Faculty:

Dr. NIKUNJ DOMADIYA ASST PROF, computer Engineering Department, LDCE:

Students were very exited with the idea of showing their projects to industry and to other students and other interested persons. They prepared their ppts and also identified the bifurcation of what to show, who will present what.

Prof Tushar Champaneriya, Asst. Professor, CE Department, LDCE.

Online Kaizen - Project Presentation is very much useful for the students for presenting their progress in the project as well as they are able to interact with faculty and industry experts

Prof. Hetal Pandya , Assistant Professor, CE Department, LDCE :

Kaizen provides a platform to showcase PG students research & innovative skill . Students have presented their innovative implementation to judges .

By Students:

- It was an amazing experience on Teams, the faculty members were very supportive. Overall, our project got justice due to this whole process.
- In such situations due to coronavirus we were worried about how we will represent our work which is done by our efforts, but we appreciate the online kaizen procedure because we got a chance to represent our work and efforts. We had an online presence and it was awesome, we explained all works done by us to juries.
